

Sliding Elements Führungselemente Sistemi di guida

OMCR[®]
STANDARD DIE COMPONENTS

Sliding Elements Führungselemente Sistemi di Guida

Ⓢ The **Sliding Elements** line offers an extraordinary variety of items in order to satisfy all requirements of design and construction of sheet metal working dies. Bushes, guide posts, plates, drivers, etc. are produced according to **AFNOR, DIN, NAAMS, VDI**, norms, with high-quality materials and strict quality control, to ensure the reliability which distinguishes our products.

Ⓢ Die Linie der **Führungselemente** bietet eine einzigartige Artikelvielfalt, die alle Anforderungen an die Konstruktion und Herstellung von Stanzwerkzeugen abdeckt. Unsere Führungsbuchsen, Führungssäulen, Gleitplatten, Prismenführungen usw. werden alle gemäß den **AFNOR, DIN, NAAMS, VDI, Normen** aus qualitativ hochwertigen Materialien hergestellt und unterliegen strengen Kontrollen zur Gewährleistung der Qualität, die unsere Produkte auszeichnet.

Ⓢ La gamma **Sistemi di Guida** offre un'ampia varietà di articoli in grado di rispondere a tutte le esigenze della progettazione e costruzione di stampi per lavorazione lamiera. Boccole, colonne, piastre, guide, ecc., sono tutte realizzate nel rispetto delle **norme AFNOR, DIN, NAAMS, VDI**, con materiali di qualità e severi collaudi per garantire quella affidabilità che contraddistingue i nostri prodotti.

GB GENERALITY.

The planning of **OMCR** self-lubricating products offers the technical help to solve slide problems related to mechanical devices, dies and tools with a solution which is normalized, simple, functional and reliable.

RELIABILITY: **OMCR** self-lubricating products support high loads, are long-lasting, require little maintenance, remove assembly problems.

COSTS REDUCTION: With **OMCR** self-lubricating products, expensive, centralized lubricating systems are not longer required, maintenance time is low as well as purchase costs. Operating costs and lubricating disposal are reduced.

USE: **OMCR** self-lubricating products offer the best performance with hardened steel (**Hardness > 55 HRC**). The matched surfaces should have good surface finishes (**Ra0.8/ Rz 6.3**) and there should not be any sharp edges present which could eventually cause notching. **Units initially lubricated with a lithium base grease and then every ~100000 cycles** or after cleaning or after a long standstill, guarantee a long life of the slides.

PRINCIPLE.

Self-lubricating products **OMCR** consist of a metal base in which the lubricant is inserted. During the working phase, the lubricant is exuded between the sliding surfaces, whereby a film is formed preventing direct contact of the working surfaces, like a conventional lubricant.

BRONZE-GRAPHITE PRODUCTS (Pic.01): consist of a bronze-aluminum base in which is inserted the solid lubricant in the form of oil-impregnated sintered graphite cylinders. They offer high wear resistance; the disposition of graphite makes it possible to slide in one or two directions.

SINT300® PRODUCTS (Pic.02): they consist of a steel metal base on which a 2 mm layer of sintered material is applied which contains solid lubricants (graphite and MoS₂) and liquid lubricant (oil) dispersed in homogeneous mode at microscopic level. Thus surface contact is more extensive thanks to the lack of the graphite cylinders and the self-lubricating effect is greatly improved.

Self-lubricating SINT300® products offer higher performance than traditional bronze-graphite products (higher speed - higher specific pressure - increased P*V - greater working temperature range) and allow movement in all directions with the same effectiveness. The higher performance of the self-lubricating sintered **OMCR** products allow more compact movement than traditional self-lubricating bronze-graphite products.

NOTE: If thickness adjustment is necessary, the steel backing must be machined – Not the sintered section.

Technical property - Technische Eigenschaften - Caratteristiche tecniche

TECHNICAL PROPERTY	MATERIAL	
	SINT300®	Bronze / Graphite
Max. specific pressure P (N/mm²)	300	100
Max. sliding speed V (m/min)	40	15
Max. output PV (N/mm² * m/min)	300	200
Working temperature range T (°C)	-40÷250	-40÷150
Coefficient of friction Vs Steel μ	0.05÷0.15	0.05÷0.15

Ⓛ ALLGEMEINES.

Unsere selbstschmierenden **OMCR** Produkte sollen dem Konstrukteur helfen, das Problem des Gleitens in Maschinen, Stanzwerkzeugen und Vorrichtungen mit einer genormten, einfachen, funktionalen und zuverlässigen Lösung zu lösen.

ZUVERLÄSSIGKEIT: Die selbstschmierenden **OMCR** Produkte nehmen hohe Lasten auf, haben eine lange Lebensdauer, erfordern wenig Instandhaltung und lassen sich einfach montieren.

KOSTENREDUZIERUNG: Die selbstschmierenden Produkte von **OMCR** benötigen keine teuren Zentralschmieranlagen, die Instandhaltungsstunden und die Kosten für Einkauf, Steuerung und Entsorgung von Schmierstoffen entfallen.

VERWENDUNG: Die selbstschmierenden Produkte von OMCR bieten beste Leistung in Kombination mit gehärtetem Stahl (**Härte >55 HRC**). Die Gleitflächen sollten eine niedrige Oberflächenrauigkeit (**Ra 0.8/ Rz 6.3**) haben und keine scharfen Kanten aufweisen, die Kerbwirkung erzielen können. Eine Anfangsschmierung mit **Lithiumfett** und eine Schmierung alle **~100.000 Zyklen** oder nach langen Standzeiten bzw. Reinigung gewährleisten eine höhere Lebensdauer der Gleitelemente

PRINZIP.

Die selbstschmierenden Produkte von **OMCR** bestehen aus einem Träger aus Metall, auf den ein Schmierstoff aufgebracht wird. Beim Gleiten wird der Schmierstoff freigesetzt, verteilt sich zwischen den Gleitflächen und bildet einen Film, der dadurch dass er deren direkten Kontakt unterbindet die Abnutzung auf das Niveau einer herkömmlichen Schmierung reduziert.

PRODUKTE AUS BRONZE/FESTSCHMIERSTOFF

(Pic.01): Sie bestehen aus einem Träger aus Bronze-Aluminium, in den fester Schmierstoff in Form von gesinterten und mit Öl imprägnierten Graphitzylindern eingesetzt wird. Sie bieten hohe Abriebfestigkeit. Die Anordnung der Graphiteinlagen ermöglicht das Gleiten in eine oder zwei Richtungen.

SINT300® PRODUKTE (Pic.02): Sie bestehen aus einem Träger aus Stahl, auf den eine ca. 2 mm dicke Schicht aus Sintermaterial mit poröser Struktur aufgebracht wird, die festen Schmierstoff (Graphit und MoS2) und flüssigen Schmierstoff

(Öl) enthält, welche homogen mikroskopisch verteilt sind. Die Kontaktfläche aus Metall wird durch das Fehlen der Graphiteinsätze größer und die selbstschmierende Wirkung erheblich verbessert. Die **selbstschmierenden SINT300®** **produkte** von **OMCR** bieten bessere Leistungen als die herkömmlichen Produkte aus Bronze/Festschmierstoff (höhere Geschwindigkeit, größerer spezifischer Druck, größer PV-Wert, breiterer Betriebstemperatur-Einsatzbereich) und ermöglichen ein Gleiten in alle Richtungen mit derselben Wirkung.

Die besseren Leistungen der **selbstschmierenden Sinterprodukte** von **OMCR** gestatten die Gestaltung von kompakteren Gleitelementen gegenüber den herkömmlichen selbstschmierenden Produkten aus Bronze mit Festschmierstoff.

Anmerkung: Eventuell erforderliche Anpassungsarbeiten sind auf der Stahlseite und nicht auf der Sinterbronzeschicht auszuführen!

① GENERALITÀ.

Il programma di prodotti autolubrificanti **OMCR** si propone di aiutare i progettisti nel risolvere il problema degli scorrimenti nelle apparecchiature meccaniche, stampi e attrezzature, con una soluzione normalizzata, semplice, funzionale e affidabile.

AFFIDABILITÀ: I prodotti autolubrificanti **OMCR** sopportano alti carichi, hanno una lunga durata, richiedono poca manutenzione ed eliminano gli inconvenienti al montaggio.

RIDUZIONE DEI COSTI: Con gli autolubrificanti **OMCR** non sono necessari i costosi impianti di lubrificazione centralizzata, si riducono le ore di manutenzione e i costi per l'acquisto, la gestione e lo smaltimento dei lubrificanti.

USO: I prodotti autolubrificanti **OMCR** offrono le migliori prestazioni in accoppiamento con acciaio temprato (**Durezza >55 HRC**).

È opportuno che le superfici in accoppiamento abbiano una buona finitura superficiale (**Ra 0.8/ Rz 6.3**) e che non siano presenti spigoli vivi tali da generare effetti di intaglio. Una lubrificazione iniziale, con **grasso saponificato al litio**, e lubrificazioni a intervalli di **~100000 cicli** o in caso di lavaggi o soste prolungate garantiscono la durata degli elementi di scorrimento.

PRINCIPIO.

I prodotti autolubrificanti **OMCR** sono costituiti da una base in metallo nella quale viene inserito il lubrificante. Durante la fase di lavoro, il lubrificante viene rilasciato e si dispone tra le superfici in scorrimento, formando così un film

che, impedendo il contatto diretto, riduce l'usura al pari di una lubrificazione tradizionale.

PRODOTTI IN BRONZO-GRAFITE (Pic.01): sono costituiti da una base in bronzo-alluminio nella quale viene inserito il lubrificante solido sotto forma di cilindri di grafite sinterizzata e impregnata di olio. Offrono elevata resistenza all'usura; la disposizione degli inserti in grafite rende possibile lo scorrimento in una o due direzioni.

PRODOTTI IN SINT300® (Pic.02): sono costituiti da una base in acciaio sulla quale è applicato uno strato di 2 mm in materiale sinterizzato con struttura porosa che ingloba del lubrificante solido (grafite e MoS₂) e del lubrificante liquido (olio) dispersi in modo omogeneo a livello microscopico, la superficie di contatto risulta quindi più ampia per la mancanza degli inserti in grafite e l'effetto autolubrificante è notevolmente migliorato.

I prodotti autolubrificanti in **SINT300®** offrono maggiori prestazioni rispetto ai tradizionali prodotti in bronzo/grafite Pic.03 e Pic.04 (maggiore velocità, maggiore pressione specifica, maggiore P*V, maggiore gamma di temperature di esercizio) e permettono lo scorrimento in tutte le direzioni con la stessa efficacia. Le maggiori performance dei prodotti autolubrificanti in sinterizzato **OMCR** permettono di realizzare scorrimenti più compatti rispetto ai tradizionali prodotti autolubrificanti in bronzo-grafite.

NOTA: gli eventuali adattamenti sono da effettuare sulla base in acciaio e non sul riporto sinterizzato.

Wear amount in opposition to Steel HRC 58÷60 P*V=200

LINEAR TRIBOMETER - LINEARES TRIBOMETER - TRIBOMETRO LINEARE

OMCR has designed and built, for its research centre, a **LINEAR TRIBOMETER** (Patent Pending) to determine the specific pressure and speed limits of the different materials in different combinations and in different conditions of lubrication. This tool allows us to foresee the wear phenomena and the efficiency of the self-lubricating products by simulating actual operating conditions and constantly monitoring the flow speed, the specific pressures, the friction coefficient and the operating temperature.

OMCR hat für ihr hauseigenes Entwicklungszentrum ein **LINEARES TRIBOMETER** (Patent Pending) entwickelt, um die Grenzen des spezifischen Drucks und der Geschwindigkeit der diversen Materialien in verschiedenen Kombinationen und unter unterschiedlichen Bedingungen der Schmierung bestimmen zu können. Mit diesem Messinstrument kann die Abnutzung und die Wirksamkeit von selbstschmierenden Produkten durch Simulation der effektiven Arbeitsbedingungen, und konstante Überwachung der Gleitgeschwindigkeit, der Flächenpressung, des Reibungskoeffizienten und der Betriebstemperatur bestimmt werden.

La OMCR ha progettato e costruito per il proprio centro ricerche un **TRIBOMETRO LINEARE** (Patent Pending) per determinare i limiti di pressione specifica e velocità dei diversi materiali in differenti combinazioni e in diverse condizioni di lubrificazione. Questo strumento consente di prevedere i fenomeni di usura e l'efficacia dei prodotti autolubrificanti simulando le effettive condizioni di lavoro e monitorando costantemente la velocità di scorrimento, le pressioni specifiche, il coefficiente di attrito e la temperatura di esercizio.

Technical drawing of a rectangular container. The overall width is labeled **A** and the overall height is labeled **L1**. The container has a base thickness of **25** and a bottom flange width of **B3**. Inside the container, there is a cluster of 10 black dots representing particles. Two circular symbols with a cross inside are positioned within the container. A horizontal dimension line on the right indicates a distance of **20** from the right edge to the center of the lower circular symbol. A vertical dimension line on the right indicates a distance of **L2** from the top edge to the center of the lower circular symbol.

Technical drawing of a rectangular plate. The overall width is labeled **A**. The overall height is labeled **L1**. A horizontal dimension **B2** is shown at the top. A vertical dimension **L3** is shown on the right side. A vertical dimension **L2** is shown on the right side, starting from the bottom edge. A horizontal dimension **B3** is shown at the bottom. A vertical dimension of 20 is shown on the left side, starting from the bottom edge. A vertical dimension of 25 is shown on the left side, starting from the bottom edge. The plate features three circular holes: one at the top center, one in the middle, and one at the bottom left. A cluster of nine small black circles is located in the bottom right corner.

[illegible]

Technical drawing of a rectangular container. The drawing shows a side view with dimensions: L1 (total height), L6 (height to the top of the first hole), L4 (height to the top of the second hole), L2 (height to the top of the third hole), L3 (height to the top of the fourth hole), and L5 (height to the top of the fifth hole). The width is labeled A. The drawing also shows a dashed line representing the centerline, a series of circles representing holes, and a cluster of black dots representing a material or component. The bottom edge is labeled B3, and the thickness of the bottom plate is labeled 20. The thickness of the side plate is labeled 25.

[illegible]
